

## ***Cleaning of RD Floor & Deck Systems***

The frequency of cleaning is dependent upon the type and volume of traffic. Below you will find general recommendations for cleaning the RD System. It is always advisable to perform the chosen method on a small test area of the system to verify that the cleaner chosen does not discolor the system.

Wash floor using warm or hot potable water and a mild cleaning solution or detergent. Avoid using any abrasives, as they will dull the finish. Cleaning may also be done using low pressure washing (up to 1,000psi and a fan tip.) or soft bristle brushes or sponge. After cleaning, rinse the area with clean warm water.

If an area of the system becomes stained or worn by heavy traffic, follow the steps above and then re-coat the area using the appropriate RD-Finish coat ( RD Mur Acryl, RD Monograff.)
